

Load Diverter

TANK TRAILER

Manual 4-Inch Load Diverter

Part Number: LD4MA

Salco's Load Diverter is a trailer-loading aid that allows drivers to maintain control over the loading process. The load diverter reduces chances of overloading the drive axles and exceeding weight limits; eliminates the need to blow product back into the railcar.

FEATURES & BENEFITS

- Provides continuous, uninterrupted loading, which can reduce loading time by 25%
- Available in 4" & 6" sizes for most loading hoses
- Easily removable for cleaning and inspection
- No need for adjusting blower speeds or using load pipe extensions
- Less contamination risk when opening the manway
- Smooth-cased aluminum construction
- Saves on fuel costs; reduces trailer maintenance
- Includes all parts; can retrofit to existing trailers

CONTROL WEIGHT DISTRIBUTION

A 3 position movable plate option is available in place of standard 2 position plate. As the trailer is loaded, the Load Diverter's moveable plate controls product flow to produce an even distribution over the drive axles. A more even load eliminates the need to "slam" the trailer to shift the load, which can lead to damaged equipment.
